Product factsheet

SEITISS - Builder and operator of industrial synergies

Software solution
Service offering

Description

SEITISS offers a unique solution to identify synergies between industrial sites. Our software solution includes more than 70,000 geolocated industrial sites in Europe and a standardised list of input/output flows for each industrial activity. We are then able to identify neighbouring industrial sites interested by your waste and/or alternative eco-products to replace your raw materials.

SEITISS - Builder and operator of industrial synergies
Published in the Water Europe Marketplace

SEITISS then operates industrial synergies: we manage targeted waste flows and provide eco-products.

Thanks to SEITISS, more than 15,000 tons of waste have been saved in 2024 !

Contact us for a quick audit of your site !

Target audience

Industries and municipalities willing to reduce their waste and/or identify alternative eco-products
