

Product factsheet

Software tool for hydraulic networks optimization

Software solution

Description

HydrOptim is a key **decision support system** tool (DSS) for the optimization of the operation of hydraulic systems.

It helps the end user **to reduce the cost** KPI (€), mainly formed by **energy unit cost** KPI (€/MWh) and environmental cost KPI (€/m3) - amongst other benefits -

Providing an optimization of the water network (distribution, irrigation, ...) scheduling decision based on pre-defined water needs.

Increases efficiency and reduces operational expenditure related to energy, water sources, process treatment, etc. ,while meeting the water demand and respecting the physical constraints.

Target audience

Water operators,
