Product factsheet

SCUBIC

Software solution

Description

SCUBIC Water System (SWS) is a suite of solutions that help water utilities optimize the Water-Energy-Data nexus. By combining decentralized databases with advanced machine learning, optimization techniques, and digital twins, SCUBIC solutions can forecast water demands, reduce energy consumption, improve the daily decision-making process, optimize pump performance, and calculate all major performance metrics automatically. SCUBIC process optimization can be connected directly to the SCADA system transforming it from a reactive system to a predictive system that can anticipate changes in the process and make decisions automatically.

Target audience

water utilities, wastewater utilities, intensive water-energy industries

Actors, their roles and interactions

water utilities, energy utilities

Unique selling points

SCUBIC WATER SYSTEM is one of the king solutions that make decisions autonomously controlling the entire water production and transport process to improve the water-energy nexus.
Water utilities are intensive energy consumers with complex networks and systems to control. At the same time, they have unique data covering most of the entire water process. However, combining decentralized databases and creating real-time information that can automatically improve daily decision-making has proven to be a complex problem to solve.
SCUBIC dedicated machine learning and optimization algorithms can: recognize patterns and identify trends; predict water demands aiding in managing water resources efficiently; detect anomalies in processes and sensors enabling rapid response to potential incidents, and maximize efficiency in water treatment and distribution process autonomously.

Technical requirements

SWS just needs access to the utilities databases.

Software data

- Version: 2.0 (Last update: 2024-03-19)
- Initial release: 2020
- Operating environments:
  - SaaS - Web application
- License type: Commercial

Technologies applied by the product

- **AI techniques**
- **Machine learning**
- **Monitoring and control systems to increase energy efficiency**
- **Optimization Algorithms**
- **Water Demand Prediction and Forecasting**
- **Water Resources and Management**

Technology Readiness Level

Level 9 (Last update: 2024-03-19)
